

ENDON®

Maya 12-Light Pendant Fitting INSTRUCTION MANUAL

Safety Warnings

- This product is only suitable for connection to a 240V~50Hz supply in accordance with current IEE wiring regulations. It should be installed in accordance with local building regulations and is for domestic use only. It is not suitable for a bathroom location.
- Before installing your light fitting always switch off the mains supply and remove the appropriate fuse or switch off the appropriate circuit breaker before commencing installation.
- This is a Class I product, and **must** be connected to Earth. The terminal blocks are supplied according to requirements of the fitting.
- Never fit bulbs of a higher wattage than those specified on the label, as these may damage the fitting.
- This fitting is **very heavy (37kg)**. Please ensure your chosen location is capable of supporting the weight of the fitting. This product will be easier to install with the help of an assistant.
- Please ensure you use fixings suitable for the mounting surface. Additional fixings may be required than those supplied.
- If you are in any doubt about your competence please consult a qualified electrician.
- If any modification is made it will invalidate the warranty and may render the product unsafe.

Care Information

Allow 10 minutes to cool before replacing, adjusting or cleaning.
Clean with a dry cloth only. Do not use liquid or abrasive cleaners on this product.

Assembly/ User Instructions

Before you start

Please read these instructions carefully before fitting and retain for reference. Check the packaging and make sure that you have all the required parts. Follow each assembly step in order to prevent incorrect assembly. Ensure that the product is fully assembled as illustrated before use.

The Light pack contains:

Light fitting, with terminal connection block(s).
Fixing pack, including hex key.
Glass panels

The following tools may be required:

Selection of cross and flat head screwdrivers.
Electric drill and assorted drill bits.
Wire strippers.
Electrical insulation tape.

These assembly diagrams are intended as a guide – if in doubt consult a qualified electrician.

1. Decide on the position of the light fitting, or remove existing light fitting. Note the position of the electrical connections. Ensure there is a solid mounting surface, preferably a wooden joist or joist bridge to support the weight of the light fitting.
2. If you want to reduce the overall length of the fitting it is essential that this is done before the fitting is mounted to the ceiling, or connected to the mains supply. Remove the chain links until the desired length is reached. The cable must now be shortened and the excess cable cut and re-connected to the terminal block. Feed the cable up through the plastic bush and form a loop above the ceiling cup, moving the figure of 8 cable restraint down the exposed cable. **NOTE: The electric cable must always be longer than the chain to prevent strain being placed on the cable. If you are unsure about your ability to do this, we recommend you contact a qualified electrician.**
3. Hook the carabiner onto the stem loop (1).
4. Remove the two finials (5) and retain for re-use. Use the fixing bracket (2) as a template to mark the screw holes. Make the screw holes and secure to the ceiling with appropriate screw fixings (3). Please ensure the fixings used are suitable for the mounting surface. Additional fixings may be required.

Assembly/ User Instructions Continued

- Support your fitting and connect the house wiring to the terminal block (4) – see expanded wiring details below.
NOTE: This is a Class I fitting and must be earthed. The 4th terminal block connector is used for the “loop” wires of the “Ring Circuit”. There may be more than one set of cables in the “loop” connections. If there is a “Ring Circuit” and you do not understand the connections you must consult an electrician. Any loose terminal blocks – not secured to ceiling cup – should always be covered with 2 layers of good quality insulation tape.
- Secure the ceiling cup over the bracket by using the finials (5) removed in Point 4.
- Fit the bulbs (6). **NOTE: Never fit bulbs of a higher wattage than those specified on the label (as these may cause overheating and damage the fitting).**
- Screw the glass panels onto the frame (7, then 8), ensuring you fit them on alternate sides to keep the fitting level.
- Turn on the power and test.
